K Series

Touring Amplifiers

19"1U, typ. 12kg/26.5lbs, unprecedented power density for high-end touring and rental businesses. Universal Regulated Switch Mode PSU 90-265V/50-60Hz, and Power Factor Correction (PFC) for maximum efficiency and lower power consumption: fewer watts in, more watts out! Optimized for 2Ω loads; reliable, audibly outstanding performance under all conditions.

Standard on board: Extensive information about and access to all amp parameters via front panel display, or via serial comm port with PC and **Armonia Pro Audio Suite™**.

Optional: **KDSP** Board – powerful audio processing with FIR/IIR/Hybrid filters; new and unique features, such as LiveImpedance™ measurement, TruePower™ limiter; and Active

DampingControl™ for greater control, better and safer performance. **KAESOP** Ethernet interface – real-time communication with PC and Armonia, plus two AES3 digital audio streams (= 4 analog channels) over the same Cat-5e cable, simply daisy-chained and auto-addressing.

M Series

Touring & Installation Amplifiers

Ideal for small to mid-sized rigs, stage monitors, professional DJ's and alike, M Series benefits from the bigger Powersoft family members – at an incredibly attractive price! Thanks to hi-tech PWM outputs, M amps are also super-efficient in their class, and could travel the world, too, with switchable 115/230V PSU. And would be carry-on baggage with just over 7kg/13lbs! **Also available: DSP and Networking!** M Series can now also be ordered as an additional version with on-board DSP and Ethernet communication port, then providing you with all the functionality you'll need to run an active system and have it sounding right. No more worries about basic system tuning, a good portion of wiring,

the expensive external X-over or DSP! Banks of 4 presets each, including a user preset, will hold configurations for various loudspeakers as well as letting you use your own personal setup. With Powersoft's free PC software **Armonía Pro Audio Suite™** you will upload preset banks, modify and manage user preset as well as security features such as password protection. The only DSP control locally on the amp is a button per channel pair on the rear panel for stepping through the presets, unless you lock it in Armonía. "Plug & safe": the DSP is tucked away inside the amp, and no one can tamper with the settings.

Stay networked via PC and Armonía, and benefit from remote control and monitoring of vital amplifier statuses and functions, including levels, temperature, faults, plus the loudspeaker itself thanks to load monitoring. Build and maintain groups of amp channels, control mute and stand-by, and other features improving system operability.

D Series & Q Series

Touring & Installation Amplifiers

Rock-solid **work horses for the sound rental company** where compact dimensions and low weight are welcome additions to greatest flexibility and classic Powersoft values: 1u is the obvious commonality with K Series, but behind the front panel D and Q Series also share all important basics with the flagship series: the legendary Universal Regulated Switch Mode PSU, Power Factor Correction (PFC), and the famous PWM output stage that sounds 'so Hi-Fi'. Only louder.

Optional: The **serial RS485 comm port** that lets D and Q Series appear on the same network as K Series or Duecanali. So, 'R' stands for 'Remote' as all vital amp functions can be monitored and controlled from a PC running **Armonía Pro Audio Suite™**.

Duecanali Series

Installation Amplifiers

A new era for installed sound: Duecanali are setting a **new record in low power consumption**. To bring the electricity bill further down, or the amount of your 'audio carbon', you'd have to turn the signal off. Or best, the whole audio system. But then you wouldn't be reading this.

So then, welcome to Green Audio Power! Truly 'green', as we haven't found a more efficient pro amplifier, yet. Listen to the 'audio': we must fear no A/B listening test, no matter what level or signal. And 'power' – well, here is both, punch and headroom, and plenty of it. With Duecanali the fame and performance of our renowned K Series is now available in the perfect format for **integration with modern sound systems in concert venues, theaters, auditoria, entertainment centers, and houses of worship** inclusive of driving 70/100V constant voltage lines direct. Keep an eye on the AC power bill (Duecanali literally pays for itself!), an ear among the audience ("...wow, what a difference!"), and don't worry – setting up, system tuning, and day-to-day operation are easily and safely under control with **DSP and AESOP networking options**.

	Channels	2Ω/ch	4Ω/ch	8Ω/ch	Models	EUR/unit	Order Code
